SUMMARY

Frontend-led full-stack engineer shipping production React and TypeScript since 2021: the core of a PWA handling millions of daily orders, a design system published as npm packages, and real-time finance UIs. Builds the Node.js REST APIs a feature depends on, sets up end-to-end test pipelines, and is extending this work into LLM-powered product features. Available for remote contracts, hourly or daily.

EXPERIENCE

Software Engineer II, Frontend · Quick-commerce platform (high-traffic delivery apps) May 2023 – Sep 2026

- Owned the core client-side logic and order life-cycle flow of a PWA restaurant app handling millions of daily orders.
- Integrated the PWA into native mobile webviews, decoupling web releases from mobile code freezes and exposing native capabilities such as push notifications to business partners.
- Engineered the team’s centralised design system as external npm packages: a component library built on shadcn/ui and Base UI, a Tailwind CSS plugin exported from the same package, and Storybook documentation.
- Set up AI-assisted workflows (Claude, GitHub Copilot) that generate standardised components on top of the design system.
- Unblocked frontend delivery by building the REST API endpoints it depended on with Node.js, Express and NestJS.
- Established Playwright end-to-end testing pipelines, significantly increasing code coverage and application reliability.
- Worked with an external vendor to integrate an AI-powered live chat into the main customer web app, reducing customer-support costs by 80%.

Frontend Developer · Fintech company Jun 2021 – Jan 2023

- Built multilingual B2C and B2B applications with React and Angular, rendering real-time, large-scale data without frontend pagination.
- Created a custom form hook and a validation library shared across multiple applications.
- Built a reusable application template with React, Material UI, Redux, Redux Saga and dark mode to speed up new projects.
- Wrote unit tests with React Testing Library and Mock Service Worker; introduced Cypress for end-to-end testing.

Frontend Developer · Software company (e-commerce and survey products) Mar 2021 – Jun 2021

- Developed a multilingual e-commerce application with server-side rendering using Next.js, TypeScript and Redux.
- Delivered a survey product with React and GraphQL; turned responsive designs into semantic HTML.

SKILLS

Frontend	TypeScript, JavaScript, React, Next.js (SSR), Angular, Vue, Redux / Redux Saga, PWA, Tailwind CSS, Material UI, Storybook, design systems, npm package publishing
Backend	Node.js, Express, NestJS, GraphQL, REST APIs, WebSockets, PostgreSQL, MongoDB, OAuth / JWT, Go (Fiber), Java / Spring Boot
Testing & delivery	Playwright, Cypress, React Testing Library, Mock Service Worker, Jest, Docker, GitHub Actions, Git
Practices	Web performance, web security, code review, AI-assisted development (Claude, GitHub Copilot), remote and async collaboration

EDUCATION & LANGUAGES

B.Sc. Computer Engineering, Sakarya University, 2020 · English (C2), Turkish (native)
